CYBERABAD MOVES 2026

November 26-28, 2026 | 09:00 AM – 06:00 PM | Venue: T-Hub

WHAT IS IT

Cyberabad Moves is a **three-day immersive experience** focused on understanding and **reimagining public transport** as the backbone of a safe, inclusive, climate-resilient and globally competitive city.

Through life-sized maps, data visualisations and interactive exhibits, Cyberabad Moves will translate complex mobility data into an **immersive and relatable public experience**. Visitors will be able to find their own neighbourhoods, trace familiar journeys and understand how their everyday travel experiences connect to the wider mobility system. The exhibition will be supplemented by leadership dialogues, public conversations, innovation challenges, and opportunities for citizens to contribute their experiences. As Cyberabad's multinational, IT and pharmaceutical sectors boom, its major employers have a unique opportunity to influence lakhs of daily commutes. Cyberabad Moves will seek to engage C-suite leaders and employees in exploring **technology-enabled Corporate Commute Nudges** for more sustainable journeys to work.

WHO IS IT FOR

Cyberabad Moves will bring together leaders, government representatives, corporates, urban practitioners, academic institutions, civil society, students and most importantly, citizens, to reflect on Cyberabad's mobility journey and **build a shared foundation** for its future.

OVERVIEW

Cyberabad is one of the **world's fastest-growing urban and economic centres**. By creating lakhs of jobs and homes, the city is attracting talent and contributing significantly to the economies of Telangana and India. This rapid growth has also increased dependence on private vehicles, while public transport and existing infrastructure have struggled to keep pace.

The consequences include congestion, deteriorating air quality, and lost productive time. Cyberabad is undertaking several initiatives to address these challenges. But building **safer, affordable, cleaner and more people-friendly mobility** begins with a shared understanding of how the city moves today.

Currently, mobility challenges are largely experienced through individual commutes. The wider patterns often remain invisible: where the city chokes, which neighbourhoods are well connected, where public transport is difficult to access, and how connectivity differs from one part of the city to another. Cyberabad Moves will **make these invisible patterns visible**, from the metropolitan scale to the street, neighbourhood and everyday journey. This shared understanding will provide the foundation for more informed public conversations and better mobility decision-making.

EVENT COMPONENTS

1. Immersive Exhibition: Life-sized maps, data visualisations and interactive exhibits will foster a shared understanding of how Cyberabad moves today, including its public transport networks, jobs and population, blue-green spaces, mobility bottlenecks and ongoing initiatives.

2. Leadership Dialogues and Knowledge Sessions: Interactive panels, debates, talks, demonstrations and roundtables will connect global ideas with local action.

3. Mobility Innovation Challenge Showcase: Selected ideas from school, colleges, corporates and citizens will be exhibited and recognised during Cyberabad Moves, bringing fresh perspectives to transform city's mobility system.
